# **REPAIRS AND ADJUSTMENTS:** No repairs or adjustments.

**NOTE 1:** The data on this summary was obtained from OECD report 2424 conducted on the New Holland T7050 Diesel.

**NOTE 2:** Report reissued, supplemental for Magnum 190 Diesel, November, 2009.

**REMARKS:** All test results were determined from observed data obtained in accordance with official OECD test procedures. This tractor did not meet the manufacturer's claim 35.7 gpm (135 lpm) remote hydraulic flow. The performance figures on this summary were taken from a test conducted under the OECD Code II test procedure.

We, the undersigned, certify that this is a true summary of data from OECD Report No. **2425** Nebraska Summary 622A, November 29, 2009.

 $\begin{array}{l} {\rm Two~710/70R38}; **; 15(100) \\ {\rm Two~600/65R28}; **; 15(100) \\ 24.0 \mbox{ in } (610\mbox{ mm}) \\ 10990\mbox{ b} (4985\mbox{ kg}) \\ 6815\mbox{ lb } (3090\mbox{ kg}) \\ 17805\mbox{ lb } (8075\mbox{ kg}) \end{array}$ 

This vehicle is equipped with an electronically controlled engine Power management system that monitors and boosts engine power output in certain circumstances. This is achieved by electronically changing the characteristics of the engine power-speed curve. The engine Power management function ("boosted" power level) becomes active in the higher transmission gears (16th and above) and for road transport applications. The system is also activated when power transfer through the PTO exceeds a preset level (and forward speed exceeds 0.5 km/h), for mobile PTO driven implement applications. An overide system is provided to enable PTO operations at the "boosted" power level while the vehicle is stationary for test purposes. The results of this PTO output test are presented below.
