Nebraska Tractor Test Laboratory

SOUND LEVEL RETEST

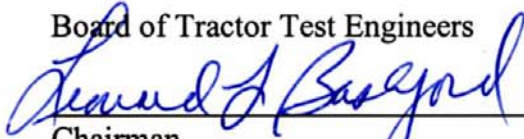

A sound level retest may be requested for a tractor model previously tested if design changes or options alter the sound level claims. Conditions for the retest are:

1. The tractor to be retested must be identical to the previously tested model except for those design changes or options whose principal function is to affect the sound level performance.
2. The power obtained on the drawbar of the retested tractor must not be less than that recorded during the original test.
3. The engine speed for the retest runs must not be less than that recorded in the original test, and:
 - a. Tractors with geared transmissions will be run in the same gear as the original test.
 - b. Tractors with variable speed transmissions must be run at travel speeds that are within +5% and -0% of the speed recorded in the original test.

The official test report will be revised and report the original sound level test results and all subsequent sound level test results.

Sound retests will be performed at the standard hourly fee for the Nebraska Tractor Test Laboratory at the time of the retest.
