SCR AND DPF TESTS FOR SALES PERMITS

As the OECD performance code changes to include performance testing requirements for any agricultural or forestry tractor equipped with an emission technology such as Selective Catalytic Reduction (SCR) and Diesel Particulate Filter (DPF) technologies, the Tractor Test Board requires relevant fuel and other consumable substance consumption tests to be performed in order to make a recommendation for a permanent sales permit. Furthermore, for any tractor equipped with an active regenerating system, the Tractor Test Board requires an exhaust system regeneration be performed only at maximum power at rated engine speed.
